

Frequently Asked Questions

What facilities are there inside a Nixon Portable Toilet?

Each chemical toilet unit has a re-circulating flushing tank, pedestal fresh water sink, soap, hand towel & toilet roll dispenser. All units are fitted with a lockable door.

How are the toilet units delivered?

Units are delivered on the back of a small Transit type van and off loaded into position by the tail lift on the vehicle.

How are they Serviced?

Each week our service vehicle (small van) will arrive on site to service the unit. They will empty the contents of the toilet, clean and deodorise the inside of the tank and toilet cubicle, prime the toilet tank with a non hazardous toilet additive and fresh water, re-stock with toilet tissue, hand towels and soaps.

What is included in the hire rate?

A free weekly service of the unit along with re-stocking of all consumables (toilet tissue, hand towels & soap). Vat is additional to any quoted hire rates.

What access will be required for delivery and service vehicle?

You need to provide enough access so our delivery & service vehicle can pull up alongside the unit. Our vehicles are the size of a small Transit type van.

Can my portaloo be moved once positioned?

Yes, but you must inform us to do it for you especially if you are moving the unit to another address to enable us to service. Care must also be taken when siting the unit to ensure that our service and collection vehicles can gain access to the toilet.
